VU-Filterz Occlusion Foils

(Compare to Bangerter Foils)

VU-Filterz is an effective substitute to traditional occlusion devices for both children and adults. VU-Filterz is an extremely thin polymer available in graduated densities that range from a very subtle reduction of visual acuity to a grey filter that offers total occlusion. The filters are cut to fit a spectacle lens by the eye care professional and are easily applied in minutes. For adults, VU-Filterz are a cosmetically acceptable means of eliminating disturbing diplopia at the higher densities.
